Message . . . . :   RTNVAR parameter has incorrect length for data area.
Cause . . . . . :   The program attempted to retrieve the contents of data
area QSHPATHLOC in library QSHONI into a program variable which has an
incorrect length. If the type of RTNVAR is *LGL, the data area or the
substring of the data area specified does not have a length of 1. If the
type of RTNVAR is *CHAR, it is not as long as the data area or substring
specified. If the type of RTNVAR is *DEC, it is not long enough to hold the
data in the specified data area. Recovery . . . :   Determine the data area
size and contents by displaying the data area (DSPDTAARA command). Then do
one of the following and try the request again: -- Change the size of either
the RTNVAR parameter or the data area. -- Change the substring length. --
Change the contents of the data area.

```
                              Message . . . . :   Object not found.  Object is /home/EVO/.
                              Cause . . . . . :    Object /home/EVO/, or a directory in the object path,
                              could not be found, or its type cannot be resolved by this function.
                              Recovery  . . . :   Correct the name or specify an object of the correct
                              type. To determine if the object exists, use the  Work with Object Links
                              (WRKLNK) command. If the name exists, check the type of the object. If the
                              name contains symbolic link objects, ensure the path names they resolve to
                              exist.  Retry the operation.
